# Bespak's Innovative Bolus Injector

# Bespak's On-Body Bolus Injector Device – 'Lapas'

---

The Lapas device enables drug delivery at home which is strongly preferred by both patients and healthcare professionals

# Lapas and VapourSoft

---

The Lapas device is driven by a novel power source which results in benefits for the patient, the healthcare service and the pharmaceutical industry

Patient	Healthcare Service	Pharma Industry
Ease of use	Cost savings via home administration	Novel power source enables easy delivery for new drugs with challenging delivery requirements
Convenience	Reduction in burden on busy hospital clinics	Works with standard drug container
Medication compliance and thus improved medical outcomes for patients	Reduction in patient complications	Easily configurable for different drug delivery requirements

# Working with the SBRI

---

With the support from the SBRI, Bepak has now launched Lapas and are looking for a pharma partner to commercialise the device

- The SBRI programme has been an excellent partner to enable the faster development of the Lapas device
- With the funds, Bepak has been able to produce prototype devices to show to the pharma industry to support the commercialisation of the device
- The SBRI has also provided:
  - Links to clinicians within the NHS to give feedback on the use of the device and direct the device requirements
  - Support and guidance during the development process
  - Framework to ensure timely results and progress within the project
