

PainSense set to exhibit all over the UK

Advanced Digital Institute (ADI Health) has built a reputation within the UK as a leader in the field of technology-enabled health and care services. With the SBRI Healthcare funding, ADI Health has developed its PainSense service which has launched across Leeds. The technology enables the user to have a balanced step-wise process to self-assess, self-manage and self-monitor changes in their persistent pain. The unique integrated reporting allows the healthcare professional to monitor progress providing support where required.

The PainSense service includes a set of apps that provide digital tools & resources to help patients manage their persistent pain. The apps are integrated with NHS systems allowing healthcare professionals to digitally monitor patient progress and deliver improved patient outcomes.

“The PainSense service is being welcomed by many health commissioners across the NHS, as it starts to provide clinicians with more options and resources to help persistent pain sufferers,” said Mr Eaglesham, CEO of ADI.

ADI Health will be exhibiting at a number of shows around the country to present the PainSense service to health professionals that are looking at ways to improve their services for people suffering from persistent pain.
